Education

Bachelor of Science in Computing Science

University of Alberta

Edmonton, AB

Expected Graduation: 2027

Relevant Courses: Algorithms | Machine Learning | Software Engineering | Database Management | Computer Organization & Architecture

Experience

Full Stack Developer Intern

Jarillo Consulting

Edmonton, AB

Jan 2026 – April 2026

- Accelerated feature delivery 30% as Scrum Master for a 7-person Agile team, driving sprint planning and PR reviews.
- Reduced deployment failures 40% by architecting CI/CD pipelines via GitHub Actions and Vercel on Azure VM infrastructure.
- Shipped Field Notes AI, a React Native app for social workers, architecting a self-hosted Supabase backend with zero-vulnerability SonarQube/CodeQL gates.

AI Software Developer Intern

JuliGerm

Lesotho, South Africa (Remote)

Apr 2025 – Aug 2025

- Reduced system downtime 30% by designing AI-powered Azure pipelines for agricultural and satellite data at scale.
- Cut farmers' manual tracking effort 40% via a search engine unifying crop health, soil, water, and weather data.
- Ensured reliable, scalable delivery by deploying backend services on Microsoft Azure engineered for fault tolerance.

Projects

Field Notes AI | React Native, Supabase, Azure, SonarQube, Jest

Team Project

April 2026

- Maintained zero critical vulnerabilities by enforcing ESLint, CodeQL, and SonarQube gates on a cross-platform app.
- Ensured reliable deployment by architecting a self-hosted Supabase backend and automating APK build pipelines.

Mood Tracker Android App | Java, Android SDK, Firebase, Google Maps SDK

Team Project | Github Repo: github.com/cmpu301-w25/project-kernelcrew

April 2025

- Enabled 100+ users to track emotions by building an Android app with geotagged pins, timestamps, and offline sync.
- Increased daily log completion 25% in testing by adding authentication, social following, and push notifications.

CampusNest: Student Community App | React Native, Expo, Supabase, TypeScript

Personal Project | github.com/campus-nest/campusnest | campusnest.uofacs.ca

April 2026

- Shipped a cross-platform app serving student housing needs, built full-stack with React Native, Expo, and Supabase.
- Reduced onboarding friction by integrating Supabase auth, real-time sync, and React Hook Form + Yup validation.

Sign Language Detector | OpenCV, TensorFlow, Python, Jupyter Notebooks

HackED 2024 | Github Repo: github.com/adityadipakpatel/Sign-Language-Detector

January 2024

- Achieved 90% gesture-to-text accuracy by building a real-time sign language detector using TensorFlow and OpenCV.
- Improved accessibility for Deaf and Mute users by cutting gesture recognition latency to under 200ms.

Technical Skills

Languages: Python, Java, C/C++, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks & Libraries: ReactJS, NodeJS, ExpressJS, Redux, Django, Flask, PyTorch, TensorFlow, scikit-learn

Databases & Cloud: PostgreSQL, MySQL, MongoDB, Microsoft Azure, Amazon Web Services, Google Cloud Platform

Developer Tools: Git/GitHub, Postman, Docker, Android Studio, Linux, Windows
